Profile Change feature

Game Genie has an innovative feature called Profile modify. This is used when a game save is locked so it can only be used by one person. Meaning you cannot use a save game created by any other user. Many games are locked to the user that saved them. If you find yourself in a situation where you want to be able to use a save from another user, or even give one of your own saves to another user then you need to use the following procedure.

Step 1: Remember your Profile

First Game Genie needs to know whose profile you want to assign to games. To do this is easy. Simply right click on a save that was created by you.

You can change the Profile 1 name to something appropriate. In this example we will use Game Genie. We will tick the Default box so this Profile is used by Default

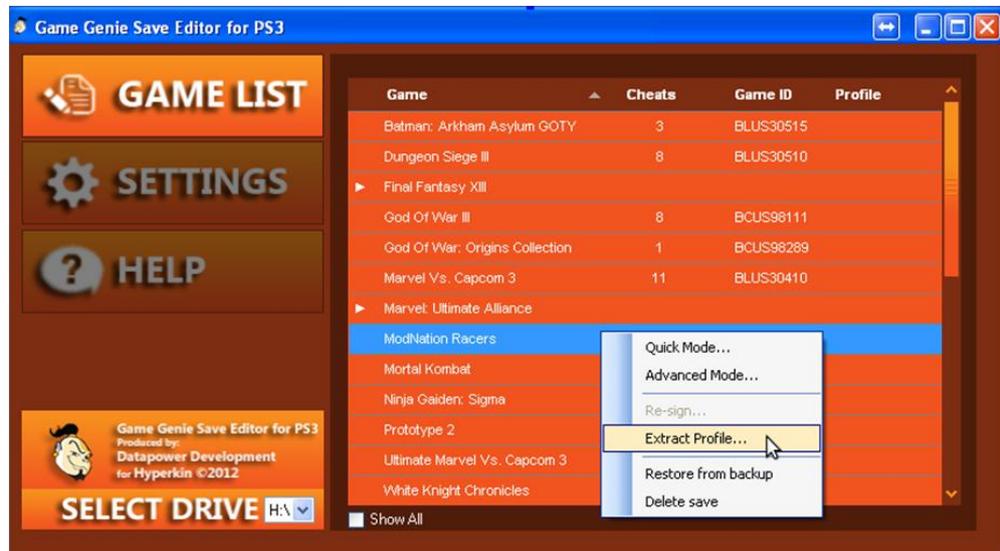

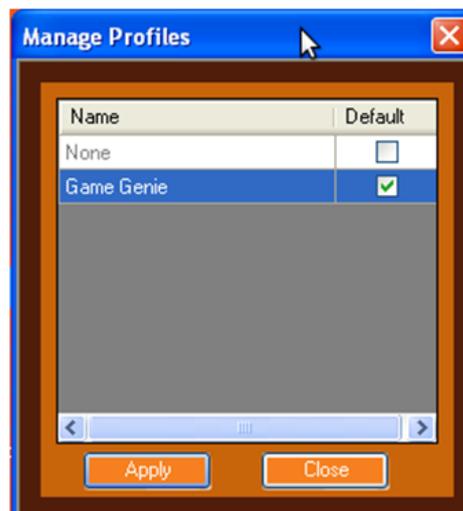

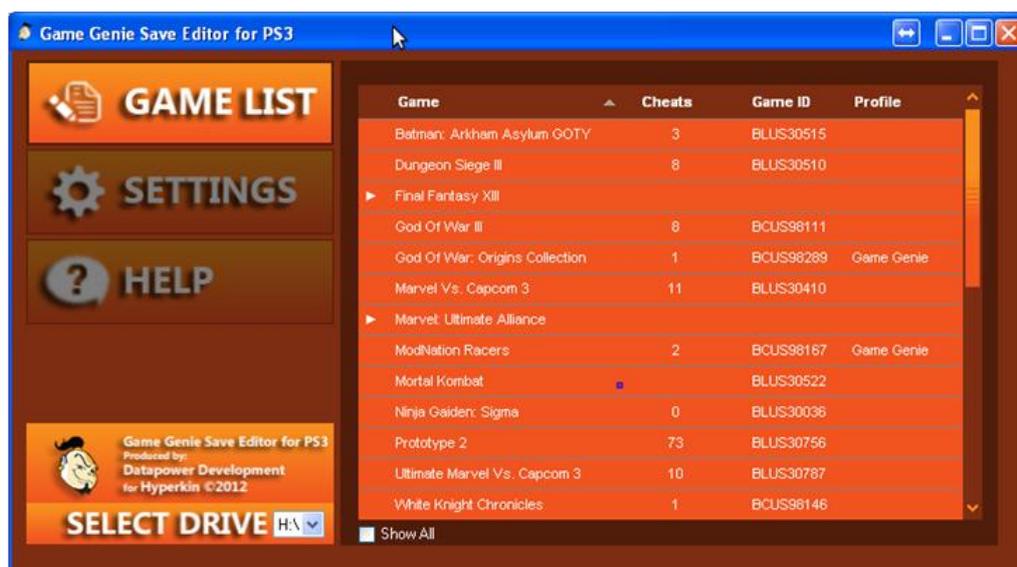

Illustration 1: Extract Profile

Once you select the Extract Profile box you will be shown window like the following

Finally you must click Apply to save the profile. You can save up to 4 Profiles. You can view, delete or rename profiles in the SETTINGS menu.

Now that Game Genie Save Editor knows your profile, it is possible to apply to other games. You might get a game save from a friend, or download it from the Internet, or perhaps you want to give your friend some of the Game Genie cheats. To apply this profile you need to do the following. If we view the Game saves that were on the Game Genie Device above, there is now a new Column shown and it displays "Game Genie"

Game Genie knows that these two save games already have the Game Genie Profile. To apply this profile to another Save game is very easy. Simply right click on a different save and select the re-sign option. In

our case we already selected Game Genie to be default so that will be shown as the first option.

Once you select OK, the Profile will be applied to the selected game.

Troubleshooting

What to do if things go wrong

Q Why don't the cheats work

A.

- ✓ First thing is to check that they have processed by Game Genie properly. To check make sure the Game Genie Watermark is present, every game that has been modified by Game Genie will have the text "Modded by Game Genie" which you can view from the save game editor. If this is not present then Game Genie has not made any changes to your save game and something must have gone wrong, did you remember to copy the modified save game back from your USB drive?
- ✓ If you have checked that the watermark "Modded by Game Genie is present and the cheat still does not work, then try applying the cheat at a different point in the game. Some games need you to play a little bit further.
- ✓ Try the cheat without any download patches, sometimes downloadable content can change the way a game works
- ✓ Check the GameGenie facebook page to see if anyone else has come across similar problems.
- ✓ Check the Game Genie Twitter feed for information.

- ✓ Check the (RSS) message history which is shown when you start the Game Genie program, it can contain important information on how to use cheats.
- ✓ If you tried all the above and still get no luck, then perhaps you have found a faulty cheat, in which case please report it and we will check the cheats and if we find they are faulty, we will fix and update them. What we need is the game Reference number which is on the disc and on the Box and also the save game itself, it is of the form BLUS-60300. Also note down what cheats you tried and where you were in the game. Finally if you can also send us a ZIP or RAR of your save game, that too would help us.

Q. Why doesn't Game Genie install correctly?

A. You Must have a USB Flash Drive inserted into your PC in order to use Game Genie Save Editor. Your PC must be connected to the Internet during installation, and use of Game Genie Save Editor.

Q. I can't copy the save from the PS3 to a USB drive, how can I cheat these games

A. Unfortunately if you cannot get the save from your PS3, there is currently no way to cheat this game. We are working on this issue and hope to have an upgrade available in the future.
